REC_DS using C_Week 4_COD_Question 3

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Write a program to implement a queue using an array and pointers. The program should provide the following functionalities:

Insert an element into the queue. Delete an element from the queue. Display the elements in the queue.

The queue has a maximum capacity of 5 elements. If the queue is full and an insertion is attempted, a "Queue is full" message should be displayed. If the queue is empty and a deletion is attempted, a "Queue is empty" message should be displayed.

Input Format

Each line contains an integer representing the chosen option from 1 to 3.

Option 1: Insert an element into the queue followed by an integer representing the element to be inserted, separated by a space.

Option 2: Delete an element from the queue.

Option 3: Display the elements in the queue.

Output Format

For option 1 (insertion):-

- 1. The program outputs: "<data> is inserted in the queue." if the data is successfully inserted.
- 2. "Queue is full." if the queue is already full and cannot accept more elements.

For option 2 (deletion):-

- 1. The program outputs: "Deleted number is: <data>" if an element is successfully deleted and returns the value of the deleted element.
- 2. "Queue is empty." if the queue is empty no elements can be deleted.

For option 3 (display):-

- 1. The program outputs: "Elements in the queue are: <element1> <element2> ... <elementN>" where <element1>, <element2>, ..., <elementN> represent the elements present in the queue.
- 2. "Queue is empty." if the queue is empty no elements can be displayed.

For invalid options, the program outputs: "Invalid option."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 1 10

```
24,180,1098
Output: 10 is inserted in the queue.
    Elements in the queue are: 10
    Invalid option.
    Answer
    #include <stdio.h>
    #include <stdlib.h>
    #define max 5
    int queue[max];
    int front = -1, rear = -1;
   You are using GCC
int insertq(int *data)
      //Type your code here
      if(rear==max-1)
        return 0;
      else
        if(front==-1)
          front=0;
        rear+=1;
        queue[rear] = *data;
        return 1;
      }
      return rear;
      return front;
    int delq()
      //Type your code here
                                                     241801098
      if(front==-1 && rear==-1)
        printf("Queue is empty.\n");
```

24,180,1098

241801098

241801098

```
return rear;
else : "
                                                                                    24,180,1098
       else if(front==rear)
          printf("Deleted number is: %d\n",queue[front]);
          front=rear=-1;
          return rear;
       }
       else
          printf("Deleted number is: %d\n",queue[front]);
          front+=1;
          return front;
                                                                                    24,180,1098
                            241801098
     void display()
       //Type your code here
       if(front==-1 && rear==-1)
          printf("Queue is empty.\n");
       else
       printf("Elements in the queue are: ");
                                                        24,180,1098
       for(int i=front;i<=rear;i++)</pre>
         printf("%d ",queue[i]);
       printf("\n");
     }
     int main()
       int data, reply, option;
       while (1)
                                                                                     241801098
                                                        241801098
          if (scanf("%d", &option) != 1)
            break;
          switch (option)
```

```
241801098 case 1:
if (-
                                                                                     24,180,1098
                                                         24,180,1098
               if (scanf("%d", &data) != 1)
                  break;
               reply = insertq(&data);
               if (reply == 0)
                 printf("Queue is full.\n");
               else
                 printf("%d is inserted in the queue.\n", data);
               break;
             case 2:
               delq(); // Called without arguments
               break;
             case 3:
                                                                                     24,180,1098
               display();
               break;
             default:
               printf("Invalid option.\n");
               break;
          }
        }
        return 0;
```
